

The Hospitality 360SM way: ServerCall[®]

INTERACTIVE ENTERTAINMENT

SOFTWARE SOLUTIONS

Wouldn't it be wonderful if your servers knew exactly when customer orders are ready, serve the food fast and hot, and stay in the dining area longer to provide better service? Or, you could always have them in the kitchen waiting for the order and hope that your guests don't mind the service.

NTN ServerCall paging systems help restaurant serving staffs operate at a new level of efficiency and customer service. Your servers are in constant communication with the kitchen and managers without having to leave their stations. Food service becomes more efficient, and your guests receive their meals faster and hotter, all translating into accelerated table turns and satisfied guests.

It's just one of many ways Hospitality 360 is changing the industry, providing a wide range of products to increase your revenue, enhance the guest experience, and improve your bottom line.
